

easyinform allows you to inform your inventors automatically when a patent application is filed and granted.

Every patent application must include the designation of the inventor(s).

The implementation of this requirement within your organization can quickly become complex and excessively time-consuming.

Your issues

- Inform your employee-inventor automatically
- Manage the risks

Why do I use easyinform?

- **Simple:** With easyinform, you can transmit and fill in the inventors' contact details and their communication languages (French or English), directly online via IP data². You can select the inventors and send them information about the filing and the granting of the patent. easyinform allows you to visualize the number of messages sent and to be sent.
- **Secured:** Once the information required for the proper functioning of the service has been provided (email and communication language), an electronic message is sent to each inventor when an application is filed and a patent granted. A copy of this email will be available via IP data², 24 hours after the sending, in the concerned file.

Which risks if I don't inform my inventors?

- The law does not provide for any sanction against an employer who fails to fulfill this obligation. However, an employee who was not duly informed could claim damages in the form of civil liability.
- The employee could also raise the lack of information to contest the limitation period for an action for payment of additional compensation.
- The Court of Cassation considered that the limitation period starts from the date on which the employee became aware of the elements giving rise to compensation.

How to subscribe to easyinform?

Log in to your IP data² administrator account and access the easyinform page.

At the first connection, you will be asked to confirm your subscription and to accept the general conditions available online.
