

ip scan allows you to identify what you need to protect within your R&D teams to improve the protection of your intangible assets and enhance the value of your investments.

Your issues

- Identify what can and should be protected how
- Develop your portfolio of intangible assets
- Simplify your process of identifying innovations within your R&D teams

A rigorous process

- Our professionals will work with you for a 1/2 day to ensure the **identification of 3 inventions** at a competitive flat rate
- They determine with the teams the topics available for patenting, identifying with them yours closest prior art and the technical problem solved for each topic. They will then assist you in collecting all the necessary documents for the drafting of the patent
- Each innovation is summarized in a document that explains:
 - the invention's context
 - the problem posed by the prior art
 - the formulation of a claim idea, and
 - an evaluation of the invention according to different criteria (patentability, maturity, economic interest)
- This document is specially designed to be used transversally by all your departments, in order to choose your optimal protection strategy by involving all stakeholders
- This process can be completed with a complementary search for prior art, conducted by our patent search experts
